

Big Bottle Water Washing Filling Capping Machine

Description

The Big Bottle Water Washing Filling Capping Machine is a fully automated solution designed for 3L to 10L bottled water production. With advanced rinsing, filling, and sealing technologies, it ensures hygienic, precise, and efficient bottling. Ideal for large water factories, this machine delivers stable performance and consistent product quality.

Suitable for

Drinking water, Mineral water, Purified water, Beverage-grade large-bottle filling

Machine Features

- Advanced 3-in-1 design: washing, filling, and capping in one unit
- Suitable for large-volume bottles (3–10L), ensuring stability and accuracy
- Mechanical valve with liquid level sensor for precise filling control
- Fully automated operation reduces labor cost and improves efficiency
- High-grade stainless steel construction ensures hygiene and durability
- Easy to operate, clean, and maintain, ideal for continuous production
- Compatible with different cap types for flexibility in production
- Designed according to international standards with reliable performance

Filling System

- Mechanical valve
- Liquid level detection valve
- Flow meter
- Electronic Weighing
