

I Can Filling Machine

I Description

Our advanced Can Filling Machine is designed to meet the demands of modern beverage production, ensuring high-speed, precise, and hygienic filling for water, beer, juice, carbonated and energy drinks. With a production efficiency of up to 15,000 cans per hour, this equipment delivers consistent performance, flexible application, and easy operation. Engineered with stainless steel construction and international filling technology, it is the ideal solution for medium and large beverage manufacturers aiming to boost productivity and product quality.

I Suitable for

Still water, Beer, Carbonated soft drinks, Energy drinks, Juice and flavored beverages

I Machine Features

- High-speed filling capacity: up to 15,000 cans/hour
- Compatible with aluminum and tinplate cans of various sizes
- Advanced filling technology ensures precision and minimal waste
- Hygienic stainless-steel design, easy cleaning and maintenance
- PLC control system with touchscreen for simple operation
- Suitable for both still and carbonated beverages
- Stable, reliable, and energy-efficient performance
- Compact structure with space-saving design
- Ideal for medium and large-scale beverage production lines

I Filling System

- Gravity Filling
- Isobaric Filling
- Vacuum Filling
- Hot Filling
- Servo/Flowmeter Filling
